

Poloxamer Gel For Otitis Treatment

Directions:

Administration

1. Clean ear before procedure.
2. Remove poloxamer gel from refrigerator.
3. Shake well before use.
4. Apply applicator tip to luer-lock syringe.
5. Drizzle the liquid gel into the ear. Leave medication in ear.
You may massage the ear if the animal will tolerate it.

Discharge Instructions

No swimming or baths for 10 days. This is a water-soluble product.

Recheck after 14 days or at the veterinarian's discretion.

The poloxamer gel will continuously absorb until it is gone. There is no need to remove the medication. If there is exudate from the infection that needs to be flushed schedule a recheck and clean the ear. Persistent infections may require a second treatment.

Storage

Store poloxamer gel in the refrigerator until procedure to keep it in a liquid state. Shake before use. If poloxamer gels up in syringe before or during administration, place it in the freezer for 7 minutes. This will reverse the gel back to a liquid state.

General Dosing Guidelines

Dogs or cats 10-20 lbs: use approximately 2 mLs per ear
Dogs over 100 lbs: use 5 mLs per ear

Caution: This product should not be used in animals with perforated ear drums.
